People gain knowledge, experience and professional skills through a process known as education. Not only that, education teaches people how to engage with others. Education is seen as a platform where values, norms and beliefs of a society are passed down to future generations, allowing them to grow into conforming and acceptable members of their societies.

Education has a strong role in personal developments, especially the personal developments of kids. Young children are taught the basic information needed to continue their next stages of education. As they go through stages of education, it gets harder and more specific and detailed information is taught. This personal development of knowledge and skills are crucial to work towards promising career paths.

Additionally, education passes down values, norms and beliefs in a society. This teaches young students acceptable behavior in a community. Education provides rewards and punishments, also known as sanctions, to emphasize the importance of following certain rules such as being respectful to others and being honest. This character development cultivates moral and ethical values that shape members of a society into conscientious individuals that conform to societal standards, leading to a societal development.

Moreover, education contributes to societal development by enhancing teamwork in various group activities. This improves understanding and respect for everyone, despite the differences between each individual. It promotes respect for diversity.

Furthermore, education prepares students for work. The values students learned at school, such as dedication, passion and teamwork, leads to an educated workforce that is diligent and strategic. Altogether, this leads to an economic growth in the society.

In conclusion, education is really important for individuals and also the society as a whole. It teaches specific skills and knowledge for thriving careers and encourages individuals to conform to societal standards. This conformity leads to societal impact as they learn values and norms that foster a cohesive society and boost economic growth.
